Portfolio: https://github.com/iqbalkurniadama

I am someone with a diverse background, I have experience as a front-end developer who then switched to software quality assurance. While working as a Front-End Developer, I often collaborate with the testing team to identify and fix bugs or problems found. This experience sparked my interest in looking deeper into the whole software testing process. Until now, I have decided to have a career in software quality assurance. Therefore, to achieve my goal of becoming a test team that is suitable for the industrial world, I learned manual testing and automation as well as performance testing. I believe that moving into a Software Quality Assurance role will allow me to continue to learn and grow in different contexts, while still leveraging the technical foundations I have built previously. I look forward to making a valuable contribution to ensuring that the products tested not only meet users' expectations but also provide them with satisfaction and trust.

Skills
